

L.A.C.T. UNITS

Failsafe Controls provides custom design and programming of PLC and HMI control systems for both onshore and offshore L.A.C.T. units — one of the most critical pieces of equipment in the oilfield.

Failsafe Controls' L.A.C.T. units are a favorite in the industry because they are made of the same high quality materials as costlier models, but at a much more affordable price.

As with all of **Failsafe Controls'** products, we keep a full line of parts in stock and provide 24-hour tech support to keep your systems online and fully operational.

Failsafe Controls has the knowledge to design, manufacture, and install L.A.C.T. Measurement and Control Systems. We have the knowledge of all pipeline companies' specifications and can work on any part of a L.A.C.T. System designed by Failsafe or someone else.

Features: First-out indication alarm | Operator friendly | Cutting-edge technology - automated

L to R:
BS&W Detector Probe
BS&W Monitor
BS&W Detector Card
L.A.C.T. Control Panel
